Contemporary Research in Accounting and Finance

'Middle East' (West Asia) perspectives on technology innovation leadership bring new voices to the technology innovation discourse in international development. The approaches of technology innovation leaders in this collection demonstrate commitment to building sustainable futures among the communities in which the authors live. There is a scarcity of technology innovation perspectives from within 'Middle East' (West Asia) perspectives and the initiatives and endeavors of the innovation leaders in this book have global appeal. Other developing community innovators are inspired to compete globally as they explore future

oriented sustainable innovation solutions that are context specific. Innovation and technology leadership in areas such as e-government and e-commerce are national priorities for countries such as Saudi Arabia. While there is a dense literature available on innovation diffusion in other developing community contexts (for example South Asia, the Asia Pacific region, Africa and Latin America), this book fills the gaps in the literature on 'Middle East' (West Asia) perspectives on innovation technology diffusion in developing community contexts. The book emphasizes the unique leadership perspectives and approaches of pioneers who boldly embrace "e-solutions" in government, commerce, education and environment. "e-Solutions" refers to the increasing use of multiple new communication technologies to innovate and produce meaningful change within developing communities. Contributors to this book respond to specific grassroots issues through a critical examination and investigation of key research questions from the perspective of developing communities who are committed to building sustainable futures. In unique and creative ways, they respond to the needs of communities that they know well and who are part of their lived realities. It will also inspire other developing communities to aspire to their highest potential in seeking creative solutions. (Imprint: Nova)

In the present financial world, various niche markets play an increasingly important role. One of the fastest-growing niches is, without a doubt, Islamic finance. Indeed, sustainable finance needs constantly evolving innovations, and this book offers valuable insights into Islamic capital structure and Shari'ah equity screening enriching academic discourse. "In recent years, we have witnessed the emergence of a new generation of academics and professionals specializing in various aspects of Islamic finance as knowledge and practice. This has brought about a new dynamism and also further sophistication. This book is one of such contributions, as it develops knowledge which is then transformed into practice whereby practical impact is also achieved. Being an academic book, it provokes readers' thoughts, offering a critique of the implications of the currently applied Shari'ah screenings methodologies. As a transformative practical piece, by developing an innovative screening ratio, in this book, Dr. Yildirim extends his focus on the risk-sharing based financing hierarchy, covers thoughts and the underlying philosophy, and proposes an Islamic version of a pecking order hierarchy. This framework can be considered the foundation for developing an Islamic capital structure theory. This book will benefit academics, professionals, investors, as well as policymakers working in the Islamic finance industry and would like to explore more." (Professor Dr. Mehmet Asutay, Durham University Business School, UK) "This book offers, for the first time after the inception of Shari'ah screening methodologies, a groundbreaking new stock screening solution that is comprehensible, practical, and foremost entirely derived from the primary sources of Islam (Qur'an and Sunnah). Congratulations to Dr. Ramazan for his outstanding contribution to Islamic finance and capital markets." (Associate Professor Dr. Ahcene Lahsasna) "This excellent book is a must-have for all corporate finance students/researchers interested in the theoretical aspect of capital structure and the religious discussion of Shari'ah equity screening. This book should become a companion to those involved in a quantitative research environment and aim to conduct a comparative analysis; an ideal resource for everyone, from Shari'ah scholars to Islamic finance practitioners and beginners to experts." (Professor Dr. M. Kabir Hassan, University of New Orleans, USA)

Financial Markets and Corporate Strategy European Edition 2e

Although most Arab countries remain authoritarian, many have undergone a restructuring of state-society relations in which lower- and middle-class interest groups have lost ground while big business has benefited in terms of its integration into policy-making and the opening of economic sectors that used to be state-dominated. Arab businesses have also started taking on aspects of public service provision in health, media and education that used to be the domain of the state; they have also become increasingly active in philanthropy. The 'Arab Spring,' which is likely to lead to a more pluralistic political order, makes it all the more important to understand business interests in the Middle East, a segment of society that on the one hand has often been close to the ancien regime, but on the other will play a pivotal role in a future social contract. Among the topics addressed by the authors are the role of business in recent regime change; the political outlook of businessmen; the consequences of economic liberalisation on the composition of business elites in

the Middle East; the role of the private sector in orienting government policies; lobbying of government by business interests and the mechanisms by which governments seek to keep businesses dependent on them.

Business Politics in the Middle East

For the first time, here is the complete history of the International Finance Corporation (IFC). In the fifty years since the end of World War II, the world of development finance has grown rapidly. One of the many financial institutions which cropped up to help war-torn countries with their reconstruction was the IFC. International Business Expansion Into Less-Developed Countries examines the success of the IFC in its wide variety of public sector development activities. Covering thirty-five years of IFC operations, the book thoroughly evaluates the formulation of the concept of the IFC and its evolution as a viable global development finance agency. It is the most complete and up-to-date treatment available of the IFC. The administration and operational procedures are described in detail as are case examples of financial development in all regions. Problems encountered by the IFC and new and future activities of the IFC are discussed. Scholars of economic development and international finance will find the unusual way in which the IFC was established and the case examples presented a highly valuable reference, as will students of international studies and organizations.

Strategic Corporate Finance

The past twenty years have seen great theoretical and empirical advances in the field of corporate finance. Whereas once the subject addressed mainly the financing of corporations--equity, debt, and valuation--today it also embraces crucial issues of governance, liquidity, risk management, relationships between banks and corporations, and the macroeconomic impact of corporations. However, this progress has left in its wake a jumbled array of concepts and models that students are often hard put to make sense of. Here, one of the world's leading economists offers a lucid, unified, and comprehensive introduction to modern corporate finance theory. Jean Tirole builds his landmark book around a single model, using an incentive or contract theory approach. Filling a major gap in the field, *The Theory of Corporate Finance* is an indispensable resource for graduate and advanced undergraduate students as well as researchers of corporate finance, industrial organization, political economy, development, and macroeconomics. Tirole conveys the organizing principles that structure the analysis of today's key management and public policy issues, such as the reform of corporate governance and auditing; the role of private equity, financial markets, and takeovers; the efficient determination of leverage, dividends, liquidity, and risk management; and the design of managerial incentive packages. He weaves empirical studies into the book's theoretical analysis. And he places the corporation in its broader environment, both microeconomic and macroeconomic, and examines the two-way interaction between the corporate environment and institutions. Setting a new milestone in the field, *The Theory of Corporate Finance* will be the authoritative text for years to come.
